

# Do You Know What They Can Do To You

Stealth Technology,  
Detection Evading,  
Analyst Driven Monitoring:

Deep Web  
Dark Net  
Whole Web

Really bad things can happen to you on the internet - - when you least expect it.

Risks such as physical threats and stalking, libel and slander, theft, identity leaks, employee leaks, espionage, IP infringement and more. What you don't know can hurt you. We will be your eyes and ears worrying about the shadows so you don't have to.

Using a light touch, we hide our presence by dispersing our agents through multiple secure servers located around the globe, leaving little to no signature behind. The bad guys never know that we are there.

We look where most companies don't think to look or cannot look... in the dark spaces where the really bad guys reside.

With a continuous improvement process to search and distill information, a dedicated analyst provides you actionable intelligence. Going beyond key words

only, we make the obscure connections, relying on the data, AND the meaning behind the data.

Because our search criteria changes with the changing landscape, we discover associated findings often overlooked by others, and discard the irrelevant so we can discern: This is gaining momentum! This has wings! This is a threat!

Providing 24/7 access to a dedicated analyst, we become part of your team, learning your operations and supplying you with truly actionable intelligence. This close interaction equips you with the most timely and effective response options.
