**Developed to be
invisible on all
cellular carriers,
WiFis and LANs**

**ProSecurePhone technology allows
devices, wired and wireless, with an
open operating system that has either
a cellular or Internet connection to
have the following:**

Secure voice call meta data: There is no record of the calling phone making NOR receiving phone receiving the call on either the cellular carrier or the Internet connection. Cellular carrier and Internet Provider are unaware of calls in progress.

Calls Cannot be Intercepted: any tap on the secure connection will disconnect the secure connection.

Calls Cannot be Recorded: digitally encrypted

Devices interoperate: smart phones, personal computers, laptops, tablets etc, will all operate with each other.

Secure Conference Calling and integration with your Contact List

Pseudo Phone Number. ProSecurePhone accounts use a Pseudo phone number for voice, text and emails. Therefore if captured are meaningless on any traditional cell phone or landline network.

Theft or Loss does not compromise system

security: User must know the account pseudo phone number, username and password.

ProSecurePhone provides central and remote account suspension.

Secure text and email: text and email do not use traditional network protocol.

There is no record: no record or trail of text and email traffic between devices. Text and emails are stored on the device encrypted and NEVER stored unencrypted.

Devices require decryption Key from ProSecurePhone server and must enter account pseudo phone number, username and password to view email or text.

Connections Worldwide and Proxy techniques to conceal location of servers.

Randomizing techniques prevent the blocking of commonly used IP addresses.

Double tunnel method used to secure data to a secure egress point, making SideJacking and FireSheep exploits not effective.

**MAGICALLY WE JOIN ALL TECHNOLOGY TOGETHER
WITH VERY MINIMAL EFFECT TO TRAFFIC SPEED ...
OUR FAST LANE IS FREE.**
